## OUR PRODUCTS

### HYDRANT SYSTEM

A Fire Hydrant, also called Fireplug, is a connection point by which firefighters can tap into a water supply. It is a component of active fire protection.. The water inside a charged hose line causes it to be very heavy and high water pressure

### SPRINKLER SYSTEM

A fire sprinkler system is an active fire protection method, onto which fire Sprinklers are connected. Although Sprinkler System used In Factories , Ware Houses ,Storage areas ,High Rise Residential buildings ,commercial buildings, homes and small buildings , over 96% of fires were controlled by fire sprinklers alone.

### FIRE PUMP

A Fire Pump is a part of a fire Hydrant & sprinkler system's water supply and powered by electric, diesel or steam. The pump intake is either connected to the public underground water supply piping, or a static water source (e.g., tank, reservoir,). The pump provides water flow at a higher pressure to the sprinkler system Risers and Hydrant Hose standpipes. Fire pumps function either by an Electric motor or a Diesel engine, or, occasionally a steam turbine. Types of pumps used for fire service include: horizontal split case, vertical split case, vertical inline, vertical turbine, and end suction.

### FIRE EXTINGUISHER

A Fire Extinguisher, or is an active fire protection device used to extinguish or control small fires, often in emergency situations. It is not intended for use on an out-of-control fire, such as one which has reached the ceiling, endangers the user (i.e., no escape route, smoke, explosion hazard, etc.)

### FIRE PUMP PANEL

A Fire Control Panel, when there's a call to start a fire pump in an emergency situation, you need a fire pump controller that you can count on to start every time, without fail – because life safety depends on it. The devices within a fire pump controller panel perform such functions as receiving signals from alarm devices, such as pressure operated switches, sprinkler alarm valves or remote fire alarm equipment; activating motor control devices to provide electric power to motors driving fire pumps and monitoring the fire pump.

### FIRE ALARM & DETECTION SYSTEM

A fire alarm system is number of devices working together to detect and warn people through visual and audio appliances when smoke, fire, carbon monoxide or other emergencies are present. These alarms may be activated automatically from smoke detectors, and heat detectors or may also be activated via manual fire alarm activation devices such as manual call points or pull stations.
