**Star fire Systems Pvt. Ltd**, a turnkey project solution provider in Fire & Safety System Industry. Setting our focus on attaining what is best for clients, we make sure that the quality and excellence is maintained. Providing the solutions like Designing, Supplying and Installation of Fire Hydrant System, Sprinkler Systems, Fire Alarm Systems, Fire Extinguishers Etc. is our major forte. Star fire Systems Pvt. Ltd provides effective solutions to our various clients in industrial, residential and commercial establishments such as Malls, Auditoriums, Hospitals, Schools, IT Parks etc. Right from design, selection of equipment to the installation and commissioning, the entire process is done by our expert personnel. We undertake AMCs for Fire Fighting Systems.

### Vision:

Safety and Security is a top priority of our businesses, As a result we are taking initiative to save precious life and property by implementing advance Safety and Security System. Our motive is to deliver the best possible services within our clients budget and schedule.

### Mission :

We have the vision To become No 1 leading role player in the fields of Fire Fighting, Fire Safety, Risk Assessment and training in the aforementioned fields.

To be the Customer's First Choice Provider of firefighting solutions, offering a comprehensive & unique portfolio of products and services, aiming at saving lives and protecting property at all times.

"A CLASS" LICENSED FROM MAHARASHTRA FIRE SERVICES  
FOR HYDRANT, SPRINKLER OF FIRE DETECTION SYSTEMS.

working with

We have been able to establish ourselves as leading name in offering turnkey project solutions for firefighting systems and equipment, by meeting all the specific requirements of the wide base of clientele.

Some of the factors that make us different from our competitors are as follows:

**Expert Team for Supervisions**

**Cost effective solutions**

**Timely Completion of projects**

**High Performance & Reliability**

**Customer Friendly solutions**

### HYDRANT SYSTEM

A **Fire Hydrant**, also called **Fireplug**, is a connection point by which firefighters can tap into a water supply. It is a component of active fire protection. The user attaches a hose to the fire hydrant, then opens a valve on the hydrant to provide a powerful flow of water, on the order of 350 kPa (50 lbf/in<sup>2</sup>). This user can attach this hose to a fire engine, which can use a powerful pump to boost the water pressure and possibly split it into multiple streams. One may connect the hose with a threaded connection, instantaneous "quick connector" or a Storz connector. A user should take care not to open or close a fire hydrant too quickly, as this can cause a water hammer, which can damage nearby pipes and equipment. The water inside a charged hose line causes it to be very heavy and high water pressure causes it to be stiff and unable to make a tight turn while pressurized. When a fire hydrant is unobstructed, this is not a problem, as there is enough room to adequately position the hose.

### SOME OF OUR PRESTIGIOUS PROJECTS

### SPRINKLER SYSTEM

A **fire sprinkler system** is an [active fire protection](#) method, consisting of a water supply system, providing adequate pressure and flowrate to a water distribution piping system, onto which [fire Sprinklers](#) are connected. Although Sprinkler System used in Factories , Ware Houses ,Storage areas ,High Rise Residential buildings ,commercial buildings, homes and small buildings , As per hazardous area defined by standards, Fire sprinkler systems are extensively used worldwide, with over 40 million sprinkler heads fitted each year. In buildings completely protected by fire sprinkler systems, over 96% of fires were controlled by fire sprinklers alone.

### FIRE PUMP

A **Fire Pump** is a part of a fire Hydrant & sprinkler system's water supply and powered by electric, diesel or steam. The pump intake is either connected to the public underground water supply piping, or a static water source (e.g., tank, reservoir,). The pump provides water flow at a higher pressure to the sprinkler system Risers and Hydrant Hose standpipes. A fire pump is tested and listed for its use specifically for fire service by a third-party testing and listing agency, such as UL or FM Global. Or Indian IS codes , Fire pumps function either by an Electric motor or a Diesel engine, or, occasionally a steam turbine. The fire pump starts when the pressure in the fire sprinkler system drops below a threshold. The sprinkler system pressure drops significantly when one or more Fire Sprinklers are exposed to heat above their design temperature, and opens, releasing water. Alternately, other Fire Hoses reels or other firefighting connections are opened, causing a pressure drop in the fire fighting main. Types of pumps used for fire service include: horizontal split case, vertical split case, vertical inline, vertical turbine, and end suction.

### FIRE EXTINGUISHER

A **Fire Extinguisher**, or is an active fire protection device used to extinguish or control small fires, often in emergency situations. It is not intended for use on an out-of-control fire, such as one which has reached the ceiling, endangers the user (i.e., no escape route, smoke, explosion hazard, etc.), Typically, a fire extinguisher consists of a hand-held cylindrical pressure vessel containing an agent which can be discharged to extinguish a fire.

There are two main types of fire extinguishers: stored-pressure and cartridge-operated. In stored pressure units, the expellant is stored in the same chamber as the firefighting agent itself. Depending on the agent used, different propellants are used. With dry chemical extinguishers, nitrogen is typically used; water and foam extinguishers typically use air. Stored pressure fire extinguishers are the most common type. Cartridge-operated extinguishers contain the expellant gas in a separate cartridge that is punctured prior to discharge, exposing the propellant to the extinguishing agent. Cartridge operated extinguishers are available in dry chemical and dry powder types ,and in water, wetting agent, foam, dry chemical (classes ABC and B.C.), and dry powder (class D) types in the rest of the world.

### FIRE PANEL

**A Fire Control Panel, When** there's a call to start a fire pump in an emergency situation, you need a fire pump controller that you can count on to start every time, without fail – because life safety depends on it. Eaton's fire pump controllers are designed and manufactured in accordance with the strictest fire protection, electrical and insurance codes in the world, thereby ensuring they meet or exceed all required standards. The DIESEL Plus Fire Pump Controllers are designed to control and monitor 12 or 24 volt, diesel fire pump engines and are among the most technically advanced diesel engine controllers available. The devices within a **fire pump controller panel** perform such functions as receiving signals from alarm devices, such as pressure operated switches, sprinkler alarm valves or remote **fire** alarm equipment; activating motor control devices to provide electric power to motors driving **fire pumps** and monitoring the **fire pump** ...

### FIRE ALARM

A **fire alarm system** is number of devices working together to detect and warn people through visual and audio appliances when smoke, fire, carbon monoxide or other emergencies are present. These alarms may be activated automatically from smoke detectors, and heat detectors or may also be activated via manual fire alarm activation devices such as manual call points or pull stations. Alarms can be either motorized bells or wall mountable sounders or horns. They can also be speaker strobes which sound an alarm, followed by a voice evacuation message which warns people inside the building not to use the elevators. Fire alarm sounders can be set to certain frequencies and different tones including low, medium and high, depending on the country and manufacturer of the device.
